Trilogy Global Advisors, a Money Management Firm, Relies on ActiveBatch® to Securely Process Thousands of Transactions Daily

Leading IT Job Scheduling Software Helps Wall Street Firm to Manage Funds

PARSIPPANY, NJ – March 6, 2007 – Advanced Systems Concepts, Inc. (ASCI), a leading provider of system software solutions that enhance Windows™, UNIX, Linux and OpenVMS systems, today announced that Trilogy Global Advisors, a boutique Wall Street money management firm, is using its ActiveBatch software to execute all of their critical data processing jobs 24/7 in a Windows environment.

“We use ActiveBatch for everything we can – batch processing, reconciling transactions, downloading prices, and scheduling a variety of data jobs,” said Mark Rubin, Head of Technology Development for Trilogy Global Advisors, a New York City firm that manages over 8 billion dollars in assets and employs 44 people. “ActiveBatch is an anomaly in IT – it’s one of those rare products that performs complex tasks yet works nearly perfectly. We have *no* complaints.”

Rubin added that ActiveBatch is attractive in a number of other ways. “It’s very secure, easy to learn and easy to teach,” he said.

Another big benefit of the software for Rubin is that it features outstanding technical support. “The folks at Advanced Systems come to our aid right away when we have the occasional question,” he said.

ActiveBatch is a comprehensive, scalable, one-stop solution for unattended job execution across a variety of software platforms. The product is tightly integrated with Windows, giving it the ability to leverage many of that platform’s security, management and scheduling capabilities while also simplifying learning and implementation curves.

ActiveBatch, now in Version 5 release, is used by an impressive list of companies around the world for dependable, 24/7 execution of critical data processing tasks, on time and on schedule. The application schedules and triggers assignments according to multiple parameters including event, data, date and time. ActiveBatch’s advanced capabilities allow it to schedule, monitor, pass data and run jobs on platforms that are not only heterogeneous, but also geographically dispersed. ActiveBatch is a robust application that supports a wide variety of constraints and variables. In addition to its sophisticated job scheduling components, the product can be accessed and controlled via a Web browser, with alerts and reports delivered to any desktop or wireless device.
